

## Setting up a preset scoring program in BOS

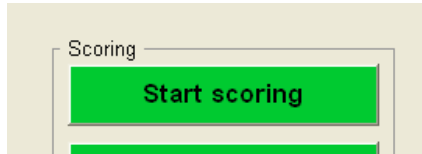

At the start BOS looks for the registry key:

HKEY\_CURRENT\_USER/Software/Jannersten Forlag AB/BOS/Settings/PresetScoring

This key contains the path to the scoring program to be opened DIRECTLY when the Scoring button is pressed. BOS will function normally, i.e. show the list of all scoring programs, if the key does not exist (or is empty).

The user can hold the shift button while clicking on Start scoring to force show the list of other programs when the key exists.

### (Optional) Using other argument types

BOS will look for a second registry key to decide which launch argument to use. This key is:

HKEY\_CURRENT\_USER/Software/Jannersten Forlag AB/BOS/Settings/PresetArgumentType

This is a DWORD value that can be set to 1,2,3 to force BOS to use a specific argument type when launching the program.

BOS argument types:

1. (default) Event=demo Session=1 BOS=C:\BOS\Events
2. "C:\BOS\Events\demo"
3. "Event=demo" Session=1 "BOS=C:\BOS\Events"
