# Several WiFi access points

You can use several WiFi access points if not all BridgeTabs would be in range.

The main features with this solution are:
• ONE network name, i.e. it does not matter to which WiFi base the BridgeTabs connect.
• Relatively easy to set up.

See the memo on Networking for another approach.

MASTER ROUTER

ETHERNET CABLES
connected to Master Router's
LAN ports*

REPEATERS

*Or repeaters that are plugged into wall power outlets
