# Setting up a WPS network

Some WiFi routers have the possibility to set up a network without Internet connection, which makes installation very easy.

An example of a simple router is Zyxcel NBG-416N where you:

1. Power on.
2. Press WPS button
3. Locate the network "Zyxcel" on a PC

to complete the installation.

Note that such an installation gives you the possiblilty to place the router in the play area as the router need no Internet connection.

Also note that it can be easier to use a separate router for the BridgeTabs if the network with Internet access has security settings blocking the BridgeTabs from connecting.
