

Unicode names in BridgeTab

BridgeScorer Control only supports standard ASCII characters, i.e. a-z, åäö, etc in names. You can use the following method to load the names if your names should be written in non Western characters such as e.g. 火, Σ, Ђ, Р.

1. Select your country's language during install of BOS package, if possible.

You can jump to step 5 if your country's names are found in the list,, otherwise:

2. Create your own name file that must have this structure:

010013,AHMET MENZI

010014,HALİL ÖNDEROLDU

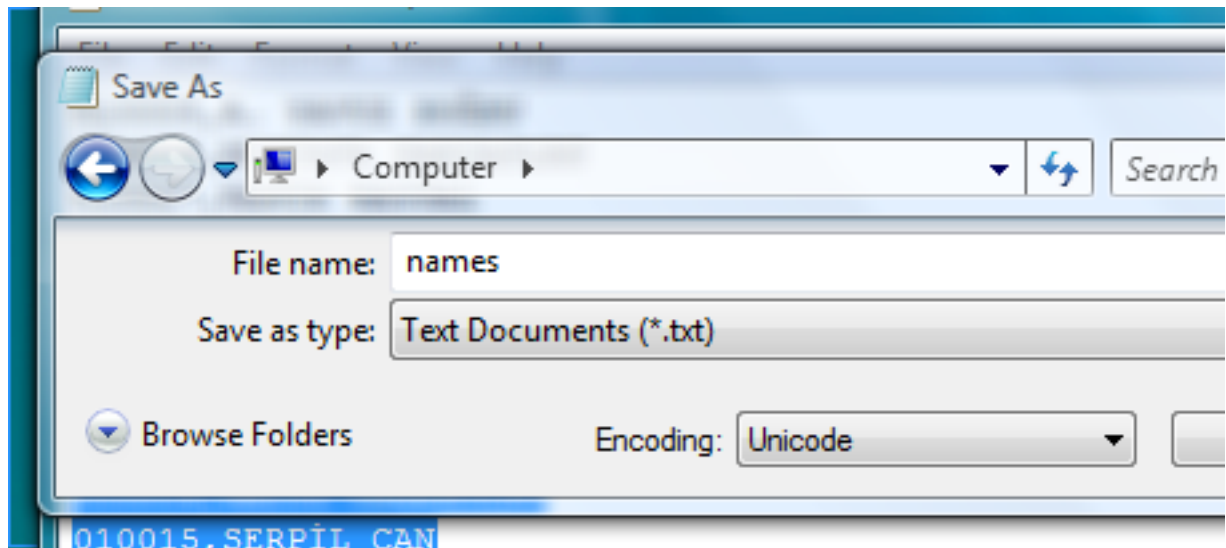

010015,SERPİL CAN

010016,MEDİHA TÜRKİBİŞ

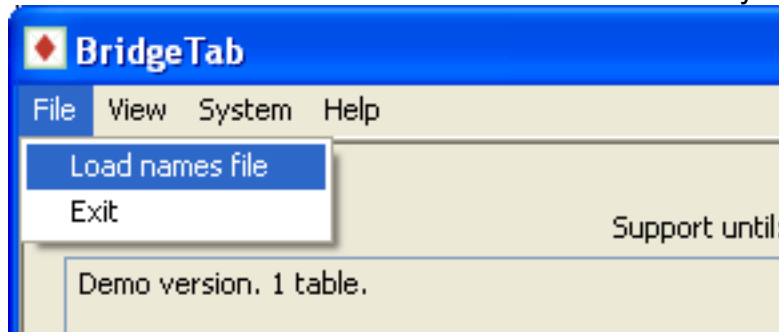

010017,NECMETTİN DOĞDU

I.e. <number><name><line break>

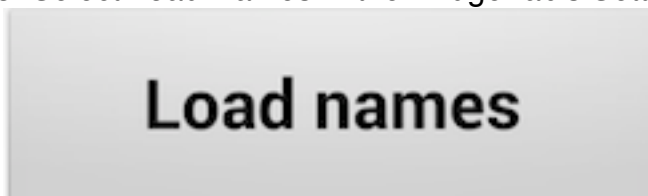

3. When you save file, make sure the encoding is set to Unicode

4. Choose Load names file in BT Admin and select your names file.

5. Select Load Names in the BridgeTab's Settings or in the TD menu.

Wait for the download to complete; it can take a while if the file is large!
